Wd my cloud ex2 admin login

The WD My Cloud EX2 Ultra, is a cloud storage device. In the WD My Cloud EX2 Ultra, you can store all your media over the cloud and access it from anywhere with the support of an internet connection. In technical terms, it is referred to as a Network Attached Storage (NAS) device. While troubleshooting your WD My Cloud EX2 Ultra NAS device, in some scenarios, you need to perform how to reset WD My Cloud Ex2 Ultra action. The WD My Cloud EX2 Ultra can be reset using two methods. These methods make use of the Reset button on the rear panel of your WD My Cloud EX2 Ultra device. By using this method to reset your WD My Cloud EX2 Ultra device, you can reset the Admin Password and the Network Mode of your device. This reset is performed with your device turned on. Follow the below instruction to perform a 4 seconds reset on your WD My Cloud EX2 Ultra device. Turn on your WD My Cloud EX2 Ultra Device. Insert the paperclip or pin into the Reset button at the rear panel of your WD My Cloud EX2 Ultra device. Now, press and hold the reset button on your device for 4 seconds. Release the reset button after 4 seconds and wait for 5 minutes till the device is reset. During the reset process, your WD My Cloud EX2 Ultra device may reboot. When the reset is complete, the Power LED on your device will turn solid blue. This kind of reset is referred to as a System Only Restore. By resetting your WD My Cloud EX2 Ultra device using this method, almost all the settings, including the Admin user name, will be reset to default values.In the previous 4 seconds method, you must have your device turned on. But in this 40 seconds reset method, the device is turned off. If you wish to reset your WD My Cloud EX2 Ultra using this method, perform the below steps. Turn off the power on your WD My Cloud EX2 Ultra device. Take a paperclip or pin. Press the reset button and hold it with the paperclip or PIN for 40 seconds. Meanwhile, pressing the reset button, plug the power cord to your device. Release the reset button after 40 seconds. Your WD My Cloud EX2 Ultra device will be reset and will reboot in the process. It will take around 15 minutes. Once the how to reset WD My Cloud Ex2 Ultra function is finished, the Power LED will light up. Collegare una terminazione del cavo Ethernet … Many HEXUS users are likely to own a Western Digital MyCloud NAS device. These are popular entry-level and up network storage devices but recently an "easy" authentication bypass vulnerability has been unveiled. Keeping their personal/family/business data private will be a major concern for many users of NAS devices, but reportedly WD has done nothing to patch the flaw to which it was alerted over a year ago. 'Welcome' to anyone After alerting WD to the privilege escalation bug in April 2017, security researcher Remco Vermeulen said that WD stopped responding to his communications. It is common practice for 'white hat hackers' to give companies 90 days to respond but Vermulen went gone way beyond this timescale (260 days) giving WD plenty of chance to respond and patch. He found that WD had issued firmware fixes over the last year, but none of them fixed this easy to exploit remote access flaw. Meanwhile, the bug was independently found by another security team, which released its own exploit code, reports TechCrunch. The remote access bug is "easy" to exploit, according to Vermulen. If your MyCloud device is set to allow remote access over the internet, an unauthenticated user can create a valid session if the username=admin cookie is set. After that the new user has "complete control" over the user's data via the MyCloud web interface. The reason for this weakness in security is that the web-based dashboard "doesn't properly check a user's credentials before giving a possible attacker access to tools that should require higher levels of access" explains the source report. Despite apparently ignoring Vermulen, a WD spokesperson responded to TechCrunch's query about this privilege escalation flaw. "We are in the process of finalizing a scheduled firmware update that will resolve the reported issue," said the company official. With regard to timing, the patch will arrive "within a few weeks". WD admitted that My Cloud, EX2, EX4 and Mirror products were vulnerable, but not the newer My Cloud Home devices. If you own one of the affected WD products then Vermeulen recommends that users "just disconnect" the device for now, to be sure to keep their data safe. Login with Forum Account Don't have an account? Register today! The UI screenshot contains a public IP address in the address bar. Lol, it's like takeaway companies that are 10 minutes late and you call them and they say "driver has just left and will be with you shortly!"Sounds like they had done nothing until it had been publicised, how silly. It's always disappointing to see when companies take their time on fixing serious security issues like this, when it should be considered essential to rectify as quickly as possible.But obviously this is the reason that public disclosure exists, to force them into it if it hasn't been done in a reasonable timeframe. The fact that they were given more than three times the standard 90 days, only to still fail to do anything proves the point even more. mark_a_scottThe UI screenshot contains a public IP address in the address bar.And the clue is public and if you do a whois - you will find some details - how much use they will be though… Why would you ever allow remote access IF you care about someone else accessing your data? tbh any device should come with plain warning - "enabling remote access makes device vulnerable" wd my cloud ssh commands If Enable ssh access on your My Cloud. Once SSH is enabled, from a remote computer, connect to the WD MyBook Live device using command line SSH or a tool of your choosing which supports SSH connections.
